## Hidraulic Testing System

Atg Hidraulic Testing System is a easy to use strong and reliable testing machine for power steering pumps and hydraulic power steering. Using this equipment you can measure the flow of oil, working pressure inside leaking of hydraulic power steering racks and pumps. You can adjust rotation speed electronically, you can choose an internal hydraulic pump or an external one. On the rack you can modify the braking force so you can verify it in different working condition. In this testing system you can check pumps that have 2 pressure line, and quick hydraulic fitting let you to connect and disconnect item on test very fast.

### MAIN FEATURES:

- Electronic speed control, adjustable by the operator
- You can choose clockwise and counter clockwise rotation
- Flowmeter that measure the system flow of oil through pump and rack
- High precision additional flowmeter usefull to check internal leaking of hydraulic distributor
- Two (2) pressure gauge to check pumps with 2 pressure lines
- Universal support of external pumps
- Thermometer to keep oil temperature under control
- Easy system to select items on test: Rack, External Pump, Internal Pump
- Universal support for hydraulic rack, strong and fast adjustable
- Hydraulic brake easy adjustable for hydraulic rack
- Quick hydraulic fitting
- Collecting system for oil
- Oil level meter for oil tank
- Made in EU, CE

### INCLUDED WITH TESTING SYSTEM:

#### Connection Kit

Pump and Rack on test

### Electronically controlled testing system

This bench let you to choose internal or external pumps, adjust turning speed and select turning direction of chuck. In this way you can select and let to work all kind of hidraulic power steering pumps and check them properly. After selecting turning direction you can modify easily the speed and read it on a clear display. Speed control system is programmed to obtain best performance form the system but user can ducide to modify working parameters according to needs.

High precision flowmeter

### Main control devices

- Power system on-off, emergency switch and safety guards
- Selection of rack and/or pumps under test
- Selection on internal or external pump under test
- Choosing of rotation direction
- Adjusting of rotation speed
- Adjusting of rack load in one or both directions
- Pumps load on each of pressure lines

Control panel

### Technical Design

The design is mechanically very strong, thick steel plate laser cut, machined properly and then assembled.

Adjustable Hydraulic brake

### After sales service

After sales service is very efficient, we have in mind that customer satisfaction and quality product are the most important points for improve business cooperation.

## EPS Testing System

EPS testing system is an innovative portable testing device, new design high performance and very competitive price. It is designed keeping in mind that it has to be easy to use and it is based on many years of experience research and development in manufacturing of electronic systems.

### Using it you can perform test on:

- Electric Power Steering column;
- Electronic Power Steering rack;
- Electro Hydraulic Power Steering pumps

### Software is user friendly, easy to use, reliable and flexible

You have to choose the car model on the menu, connect the plug and run the test. You can select the speed, activate the electromagnetic brake and let the machine to dialogue with the EPS, verify parameters, errors and perform calibration. You can easily follow the communication between testing system and EPS and you can also delete the errors that are showed by the ECU.

Electric connection Peugeot 207

Electric connection VW Golf VI

### Technical design

The design is mechanically very strong, waterproof case, reliable PC and software, large and usefull screen and diagnostic interface.
